SKILLS

LANGUAGES

- Kotlin
- Java
- Python (Basics)

ANDROID

- Android Studio
- Firebase Auth & DB
- API Integration

TOOLS & OTHER

- GitHub / Git
- App Security & Encryption
- DSA Problem Solving
- UI/UX Design

EDUCATION

B.E. — CSE (CYBER SECURITY)

Finolex Academy of
Management &
Technology
Aug 2024 – May 2028

12TH GRADE

G.K. Sapre College — 60%
2024

10TH GRADE

New English School —
74.60%
2022

AVAILABILITY

Open to Internship

Remote / On-site
Preferred: Ratnagiri,
Kolhapur, Mumbai, Pune

PROFESSIONAL SUMMARY

Computer Science Engineering student (Cyber Security) at Finolex Academy of Management & Technology with proven hands-on experience building production-quality Android applications. Developed two end-to-end Android projects: a GPS-based real-time attendance system with anti-proxy logic and an encrypted messaging application — both deployed on Firebase. Committed to writing clean, secure, and scalable Kotlin code with a strong focus on user-centric design and backend integration.

PROJECTS

CivicTrack · GPS-Based Smart Attendance System

2024 – Present

Stack: Kotlin · Android Studio · Firebase · GPS API [↗ Live Demo](#)

- Engineered real-time GPS location verification to authenticate attendance, eliminating proxy fraud with custom anti-proxy detection logic.
- Designed and integrated a Firebase Realtime Database backend for instant data sync across student and admin interfaces.
- Built a full admin dashboard supporting live monitoring, attendance analytics, and multi-user management.
- Applied secure data-handling practices aligned with app security principles studied in Cyber Security curriculum.

CryptoTalk · End-to-End Encrypted Messaging App

2024

Stack: Kotlin · Android Studio · Firebase · Encryption · Material Design [↗ Live Demo](#)

- Architected a privacy-first messaging application featuring end-to-end encryption concepts to ensure confidential communication.
- Delivered a minimal, intuitive Material Design UI optimised for usability and engagement.
- Integrated Firebase Authentication and Realtime Database for seamless real-time message delivery and secure user management.

KEY HIGHLIGHTS & ACHIEVEMENTS

- Participated in multiple Hackathons and Project Competitions focused on Android Development, Cyber Security, and innovative mobile solutions.
- Both Android projects are live, publicly accessible, and listed on GitHub — demonstrating real-world deployment experience.
- Pursuing specialisation in Cyber Security, directly applicable to building secure, production-grade Android applications.
- Completed JEE Mains 2024, demonstrating strong quantitative and analytical aptitude.
- Strong interest in competitive problem-solving, UI/UX design, and scalable mobile app development.
- Deployed 2 complete Android applications as a second-year student, available live via GitHub Pages.

WHY HIRE ME

I am not just a student who writes code — I build complete, deployable applications. My two Android projects demonstrate the full development lifecycle: problem definition, architecture, backend integration, security, UI design, and deployment. I learn fast, work independently, and am deeply passionate about Android and mobile technology. I will bring initiative, reliability, and real engineering skills from day one of my internship.
